SUMMARY

Cybersecurity graduate of Marymount University (B.S., Magna Cum Laude) with hands-on project experience in malware analysis, digital forensics, secure network design, and data dashboards. Skilled in Python automation, encryption, and building secure backend solutions.

EDUCATION

Marymount University-Arlington,Virginia
Bachelor of Science Graduated: May 2026
GPA: 3.6
Major: Cybersecurity

RELEVANT PROJECTS

Marymount University, Arlington, VA
Cybersecurity Academic Projects

- Performed malware analysis using tools like Wireshark, ProcMon, and x32dbg to identify malicious behavior and system impact.
- Analyzed indicators of compromise (IOCs) and understood how malware spreads and persists in systems.

Marymount University, Arlington, VA
Digital Forensics & Investigation Projects

- Conducted forensic analysis on storage devices, recovering deleted files and analyzing metadata using forensic tools.
- Maintained evidence integrity through hashing and proper chain of custody procedures during investigations.

Marymount University, Arlington, VA
Network Security & System Design Projects

- Built a secure Raspberry Pi router with VPN encryption, traffic monitoring, and access control for public network protection.
- Developed a phishing detection application connected to Gmail to analyze emails and identify potential threats.

Marymount University, Arlington, VA
Data Analytics & Impact Dashboard Project (Scrap Exchange)

- Designed a dashboard system to centralize fragmented data and track nonprofit impact across operations.
- Developed key performance indicators (KPIs) to measure environmental, financial, and community outcomes.

Extra Curriculars

Coded Future Collective *August 2024 - Present*

- Participated in a campus tech club dedicated to fostering connections between students and startups, while promoting collaboration within the tech community. I helped organize events and workshops that provided valuable networking opportunities and insights into emerging technologies. This experience enhanced my teamwork skills and deepened my understanding of the startup ecosystem and the role of technology in driving innovation.

TryHackMe *January 2024 - Present*

- Engaged in hands-on learning through TryHackMe, where I developed a solid understanding of core cybersecurity principles, including ethical hacking, penetration testing, and network security. I gained the ability to anticipate potential issues and errors by applying common algorithms and problem-solving techniques to real-world scenarios. This experience enhanced my coding skills, allowing me to better identify vulnerabilities and improve security through practical, data-driven solutions.

SKILLS

Technical Skills: API Integration, Web Application Development, Backend (Node.js, Python, Java), Frontend (HTML, CSS, JavaScript, React), Digital Forensics, Vulnerability Scanning, Security Hardening, Cryptography, Automation Scripting (Python, Bash, PowerShell), Security Incident Management, Incident Response, Remediation Automation, Cloud Services (AWS, Azure), GitHub, Communication Skills
